

22 July 2024

Dear Wholesale Partners,

There are no new updates regarding the supply of IV fluid products.

Regarding ordering of these codes:

- AHB2324 – 1000ml Compound Sodium Lactate [Hartmann's]
- AHB2323 – 500ml Compound Sodium Lactate [Hartmann's]
- AHB1324 – 1000ml 0.9% Sodium Chloride
- AHB1323 – 500ml 0.9% Sodium Chloride
- AHB1307 – 100ml 0.9% Sodium Chloride

Please do not continuously place orders. 1 or 2 back orders for each product code is preferable. When we come into some allocation of stock, we will release the stock against those back orders.

Allocation quantity and product code will be unpredictable. We highly recommend that all wholesalers:

- Prioritise their customers from highest need to lowest need
- Discuss with customers their ability to use any size of IV fluids, in the event their preferred size is unavailable. And to identify procedures that could use alternate sources of fluids, or less fluids
- Do not take new customers for IV fluid products

To our Vet Wholesalers, regarding:

- AHB8611 – 5000ml Compound Sodium Lactate [Hartmann's]

Please do not place any orders for this product. I will reach out to you towards the end of this month with your allocation.

Yours Sincerely

Clara Marsden
